Foldable base, galvanized steel, for 10m pole set

Doing maintenance work on a synoptic station with a 10m mast is hard work, as taking down a 10m mast isn't easy. This rugged foldable base helps to make this job a lot quicker and much more convenient.

Built of galvanized steel its lower part is meant to be cemented into a solid concrete block (see image 2), providing sufficient stability. The upper part, holding poles with a diameter of up 80mm, folds down in a 90° angle.

When installing the ADCON 10m pole set we highly recommend to also order a centering collar (see image 3). This device is made of aluminum with a 5mm wall strength and fits inside the upper tube of the foldable base, not giving the pole any slack to move.

Length overall	109,00 cm
Length top	57,50 cm
Length bottom	49,00 cm
Dimensions Plate	23 x 20 cm
Weight	15,8kg
Diameter	Outer: 90 mm Inner: 84 mm
Material	Steel, galvanized
